Contents

Introduction	1
1 Background and theory	5
1.1 Gravity, general relativity and gravitational waves	5
1.1.1 Ripples in space	7
1.1.2 Observable effects of gravitational waves	8
1.2 Sources of gravitational waves	10
1.2.1 Supernova core collapse	10
1.2.2 Compact binary coalescence	11
1.2.3 Continuous waves	12
1.2.4 Stochastic background	14
1.3 Mathematical principles of seismic motion	16
1.3.1 Theory of seismic waves	16
1.3.2 Seismic correlation	23
1.4 Linear control and the Kalman filter	24
1.4.1 State space model	24
1.4.2 State observation and the Kalman filter	26
1.4.3 Linear quadratic regulator	29
2 Gravitational wave detection	31
2.1 Interferometric detection	31
2.1.1 Interferometric principles	31

Contents

2.1.2	Limitations to sensitivity	36
2.2	Advanced Virgo	42
2.2.1	Design and optical layout	43
2.2.2	Thermal compensation	45
2.2.3	Angular alignment and control noise	47
2.2.4	Sensitivity evolution	49
2.3	Global detector network	50
2.4	Einstein Telescope	53
2.4.1	Design concept and sensitivity	53
2.4.2	Noise budget	55
2.4.3	Site and infrastructure	56
3	Seismic noise	59
3.1	Introduction	59
3.2	Ambient seismic motion	60
3.3	Seismic characterization studies	63
3.3.1	Measurement procedure and data analysis	63
3.3.2	Measurement sites	66
3.3.3	Results from candidate sites	71
3.3.4	Summary of seismic measurement results	75
3.4	Virgo seismic correlation measurements	80
3.4.1	Correlation measurements	80
3.4.2	Correlation results and analysis	81
3.4.3	Discussion	85
3.5	Summary	86
4	Newtonian noise	87
4.1	Introduction	87
4.1.1	Mathematical background	88
4.1.2	Newtonian noise derivation for numerical analysis	90
4.2	Surface detector models	93
4.3	New methods for Newtonian noise modeling	95

4.4	Numerical ambient Rayleigh wave model	95
4.4.1	Model description and method	95
4.4.2	Analysis and results	97
4.5	Newtonian noise and Advanced Virgo	102
4.6	Finite element models	104
4.6.1	Comparison with surface detector models	104
4.6.2	Finite element simulations of local excitations	104
4.6.3	Newtonian noise from local excitations	109
4.7	Ambient Newtonian noise subtraction	111
4.7.1	Wiener filter subtraction	112
4.7.2	Newtonian noise subtraction results	114
4.7.3	Discussion	119
4.8	Summary	119
5	Vibration isolation	121
5.1	Vibration isolation for Advanced Virgo	121
5.2	Vibration isolation with anti-spring technology	124
5.2.1	The inverted pendulum	126
5.2.2	The geometric anti-spring	126
5.3	MultiSAS design	129
5.3.1	Mechanical overview	130
5.3.2	Sensors and actuators	133
5.4	System modeling	136
5.4.1	Vertical model	137
5.4.2	Horizontal model	141
5.5	System characterization	146
5.5.1	Vertical transfer functions	146
5.5.2	Magic wand performance	148
5.6	Control system	149
5.6.1	Coordinate system transformation and pre-filtering	149
5.6.2	Actuator diagonalization	151

Contents

5.6.3	Vertical control and the state observer	153
5.7	Control performance	159
5.7.1	Top stage horizontal control	159
5.7.2	Vertical proportional integral derivative control	161
5.7.3	Vertical linear quadratic gaussian control	163
5.7.4	Comparative results	165
5.8	Summary	166
6	Valorization opportunities	169
6.1	Introduction	169
6.2	Sensor networks	170
6.2.1	Seismic data surveying	171
6.2.2	Current status	171
6.2.3	Other applications	173
6.2.4	MEMS accelerometers	174
6.3	Low-noise optical readout	175
6.3.1	Inertial sensor with interferometric readout	175
6.3.2	Applications	177
6.4	Vibration isolation	178
6.5	Summary	181
7	Conclusions, discussions and future work	183
A	Seismic survey results	189
	References	193
	Summary	203
	Samenvatting	209
	Acknowledgements	215
